

Equipment required along with the tower and turbine

Turbotricity™ is an Irish company making rugged, low maintenance wind turbines which will power your household requirements for decades to come. All components are either galvanised or stainless steel for durability. Ireland has the best wind conditions in Europe and we focus on providing reliable, effective turbines that can survive winds up to 140mph. Our unique combination of an air-core generator and electronics maximizes output in low wind conditions.

PROFESSIONAL TURN KEY SERVICE

Our fully trained, professional installation teams, will take care of all aspects of your installation at a time that is convenient for you. We are also happy to supply you the hardware only, if you want to self install. Nationwide service available.

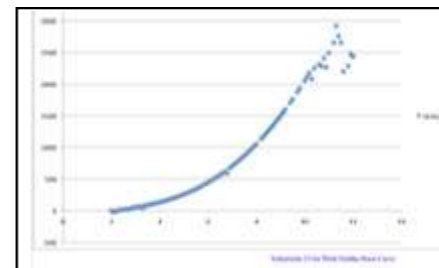

THERE'S MONEY IN THE AIR !

How Can I sell surplus electricity?

ESB has announced that for the first 4,000 microgeneration installations, they will fit a meter for free which will monitor the electricity bought and sold. That meter will be read once a year and you will receive credit for the electricity sold while your bills will be reduced for electricity you generate for yourself.

What are the payments?

9c per Kw Hr for all electricity sold to ESB. This is a variable rate which comes for review on an annual basis. There is a further 10c per Kw Hr for the first 3,000 Kw Hrs sold in any one year for the first five years of the system, bringing the total payments to **19c per KwHr**.

By using Aurora Wind Inverters, Turbotricity can maximise the energy output from our wind turbines giving superb efficiency and reliability
